

New Web Version 11.0.0

Release highlights

Optimization of the confirmation page

This new web version will enable faster loading of the confirmation page by the implementation of cache management in this section, splitting the different page components in static and dynamic information, applying a specific logic in each case, and achieving better loading times and, subsequently, user experience.

Linking reservation capacities

Every member identified as a guest in any booking is now able to link the corresponding reservation to its profile, earning the correlative amount of points. In order to do so, the member must be logged in and access the reservation of interest through the member's dashboard. By correctly retrieving the booking, the member would then be able to link it to its own Radisson Rewards profile:

- The linking capabilities occurred at room level. The new features apply to every booking type, either single or multi-room.
- As soon as the room booking is successfully linked to the member's profile, a message confirming the earning of points is displayed, the number of points earned is updated and the booking appears within my reservations section in the Radisson Rewards dashboard.
- It intends to apply either way to B2C and B2B bookings.
- The new development applies to all the reservations from all systems and business sources, even if they are non-modifiable.
- The only limitation considered when linking the booking is that it is not active by the time there is the intention of having it linked.

Display of the number of points redeemed

The correct display of the number of points redeemed in every scenario, for partial redemptions and award nights (full redemption) is guaranteed within this new version. For any kind of booking, personal and business reservations no matter if past, active, or upcoming bookings.

Customer Support Application (CSA)

The integration of the complaint form into the website will be completed in version 11. Nevertheless, it will not be available yet as some gaps were identified at back-end level and they will need to be resolved in the coming days. The web part is accomplished and the intention of the project is to bring to the users the opportunity to fill in a formal complaint about their stay, linked to a reservation number. All possible natures of the complaint will be covered through a sheet of easy user interaction.

Release notes

Most important bugs fixed

- Special characters can be used as part of the user's credentials on mobile web for iOS devices
- Display of every single interaction in my statements section, covering possible lacking information
- Accurate description of the transaction nature, covering all the different possibilities (bookers points, stay points, M&E...)
- Ability to use all kinds of special characters as part of the password in the member's accounts
- Update of the static feed in the different languages available on the website
- Correct exchange in the currencies of the cancellation policies
- Amount of taxes excluded from the total price pointing to the whole stay instead of daily
- Precise breadcrumbs on every single page of the website

List of enhancements (outside the highlighted ones) included

- Code cleaning for Choice decommission – this last phase will complete the full deactivation
- Countdown in upselling pages informing about the time remaining before the expiration of the session
- Automated gallery lists for Restaurants, Meeting Rooms, OMBT (Online Meeting Booking Tool) and different modules including multimedia files, supporting 360 and immersive content
- Unification in the date format for gallery videos coming from different sources

See the full list of tickets included:
